CSS Text Styles Assignment - Day 4

Objective: Learn and practice how to style text effectively using CSS properties.

Instructions:

1. Create a webpage with the following:

   - A heading (<h1>), a subheading (<h2>), and a paragraph (<p>).

   - A quote section (<blockquote>) and a list (<ul> or <ol>).

2. Style the following text properties:

   - Font-family: Apply different fonts to the heading, subheading, and paragraph.

   - Font-size: Use different font sizes for each text element.

   - Font-weight and Font-style: Make some text bold, italic, or both.

   - Line-height and letter-spacing: Adjust the spacing between lines and letters for the paragraph.

Bonus Task (Optional):

1. Style the list to use custom bullet points or numbering styles.

2. Experiment with text-transform to make some text uppercase, lowercase, or capitalized.

3. Apply text alignment (left, center, or right) to different elements.

4. Use text-decoration to underline or add a line-through to the quote section.

This assignment helps students explore a variety of text-related CSS properties and apply them creatively to enhance their webpage design.
